Introduction:

We designed and programmed a program called together we can that allows the user to donate either money or items, and the user can see all what he donated, and the user can learn about the most important achievements that have been achieved in using this application. This program allows the user to donate without the need to go to places for donation or charitable societies and thus help the poor and needy and to spread goodness, peace, love and brotherhood among people.

Requirements:

Together we can is organized in to donor. Each donor has a unique email, name, password, phone number and gender.

Each donor can donate many thing then he may have achievements.

Donation section has a unique ID and name of the charity to which the donation was made, it allow the donor to donate either money or items or both.

The money donation section contains the name of the bank and the amount of money .

The items donation section has: type of item, description, quantity and photo of item.

The AppAchievements has a unique ID and achievements description.

Donation list has either money or items or both that the donor has donated.

LOGIN has a unique ID and email.

Functional Dependency:

Donner table:

| Doner | |
|-------|--------------|
| PK | Ssn |
| | Email |
| | Fname |
| | Lname |
| | Password |
| | Phone number |
| | AdminUser |
| | Gender |

SSN → Email, Fname, Lname, Password, Phone number, Adminuser, Gender.

Donation table:

| Donation | |
|----------|--------------|
| PK | Did |
| | Donatefor |
| | visa |
| | money |
| | Type |
| | Description |
| | Quantity |
| | photo |
| | foreignmoney |
| | foreignitem |
| | DonSsn |

Did → Donatefor, visa, money, Type, Description, Quantity, photo, foreignmoney, foreignitem, Donssn.

Achievements table:

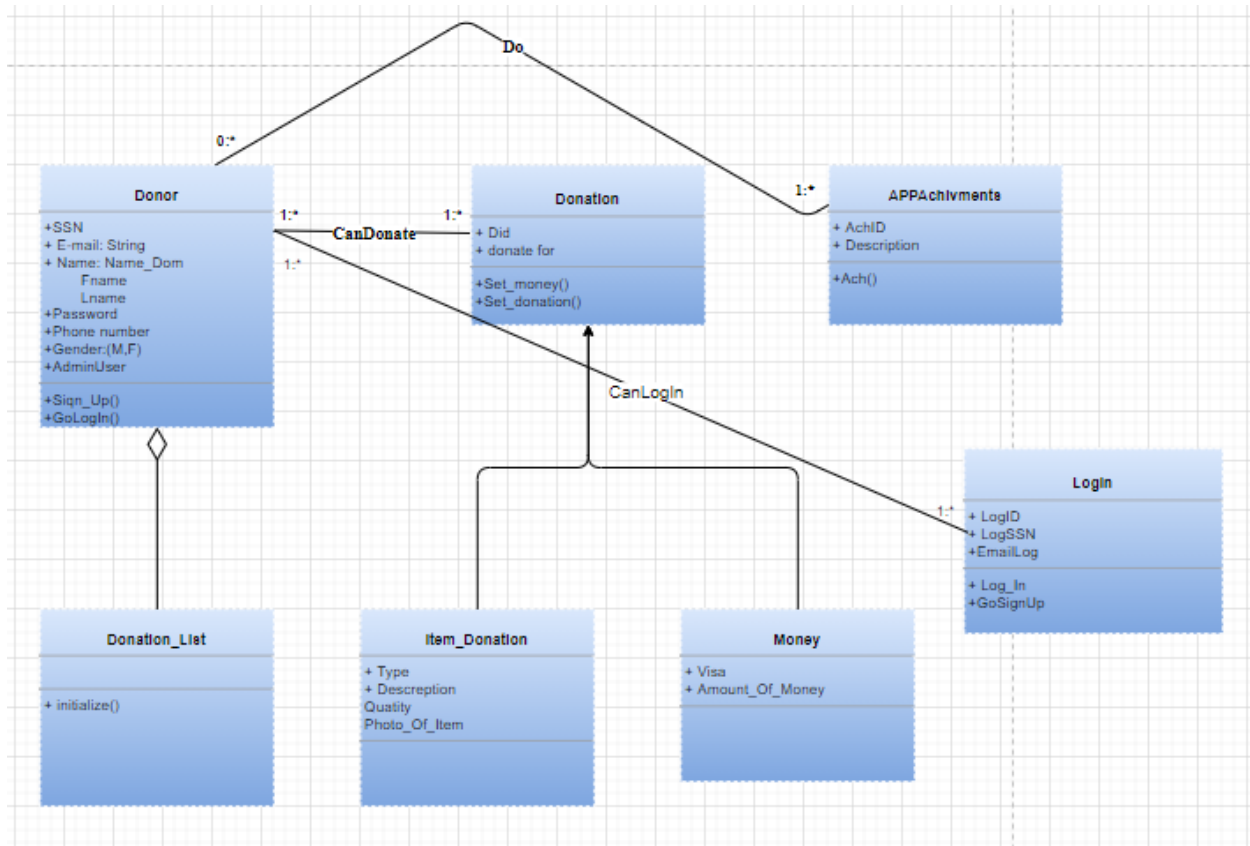

| Achivments | |
|------------|----------|
| PK | Appachid |
| | Text |

Appahid→ Text.

Login table:

| Login | |
|-------|----------|
| PK | logid |
| | logssn |
| | logemail |

logid→ logssn, logemail.

Checking if the Tables in 3NF

All tables are in 3NF.

1NF: they in which the intersection of every column and record contains only one value .

2NF: they don't have any composite key.

3NF: there is no non primary key column is transitively dependent on the primary key.

Tools Used:

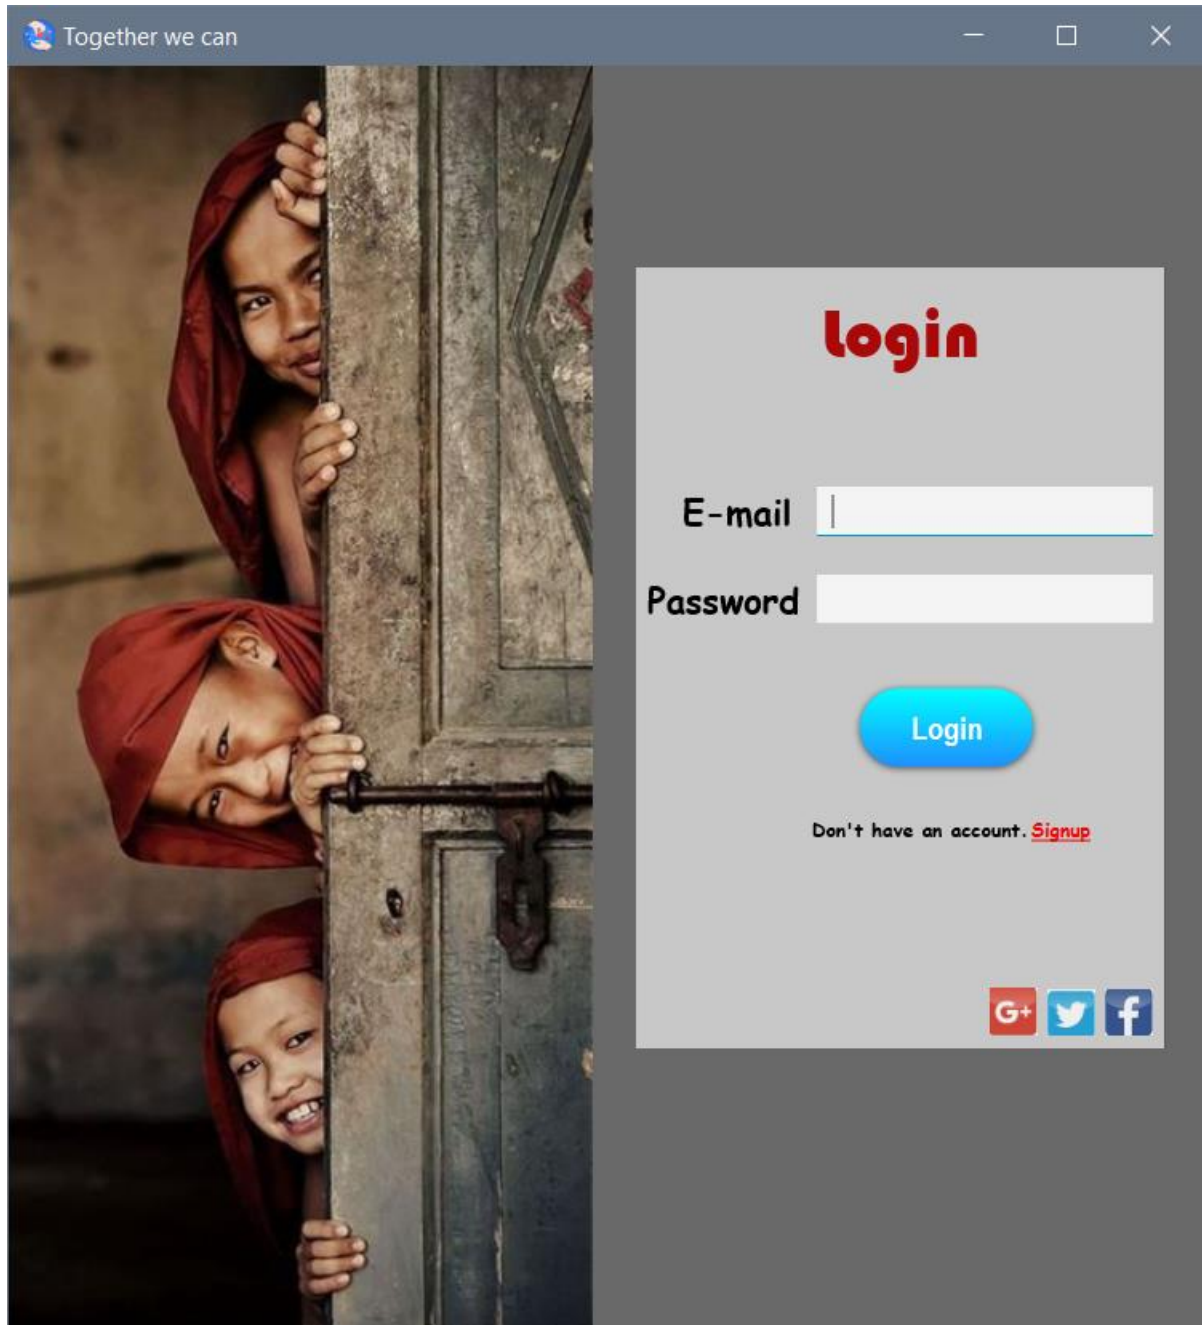

1. IntelliJ as an IDE for Java.
2. Jasper soft studio for jasper report.
3. Oracle 12.2.0.1-slim as a database which is created inside a docker container using docker-compose uml file.
4. Draw.io for creating the initial Database UML.
5. Scene Builder for creating the FXML files used inside the JavaFX Project.
6. SQL Developer for connecting and creating the database tables and SQL Testing.
7. CSS for styling the interfaces in JavaFX.
8. Word documents.
9. Text documents.

GUI:

Main page:

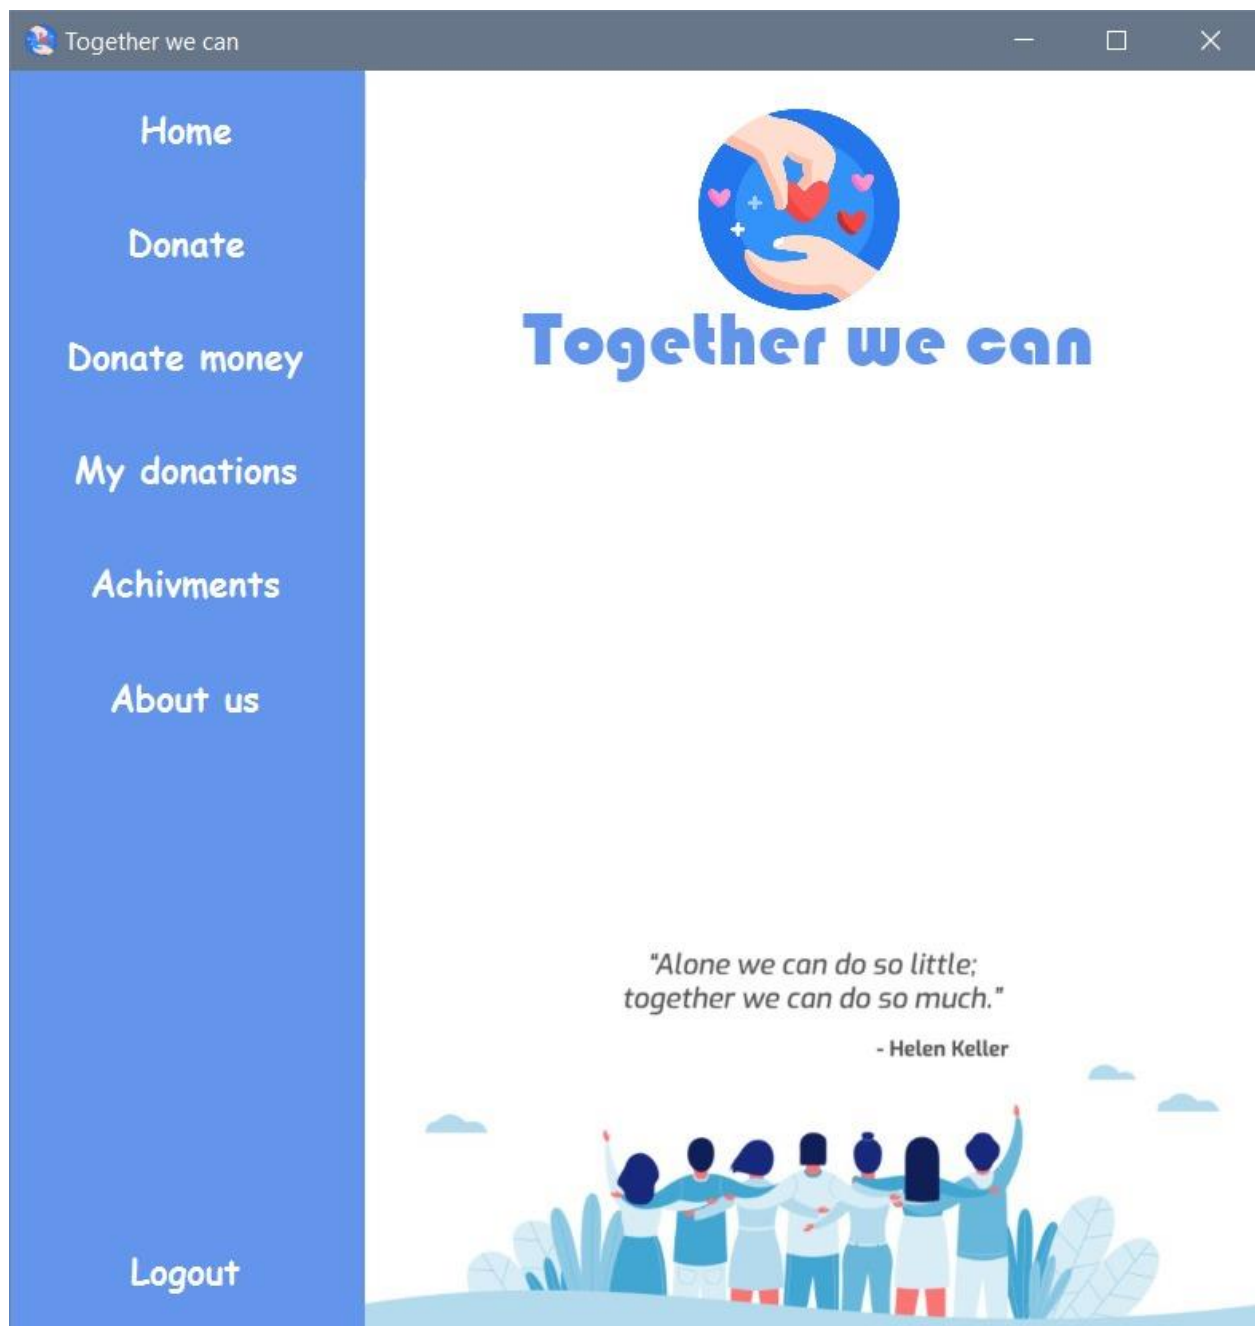

Through this interface, the user can choose whether he wants to log in or create a new account.

From email can determine if user admin or user then log in.

If the user click on signup he will go to create new account.

If the user is already registered and has entered both the email and password correctly, then the following screen appears:

When you click Donate, a screen will appear in which you can donate anything you want.

When the admin click on Add Achievements, then the admin can add a new achievements for the achievements list.

When admin click on Achievements, the Achievements screen will appear.

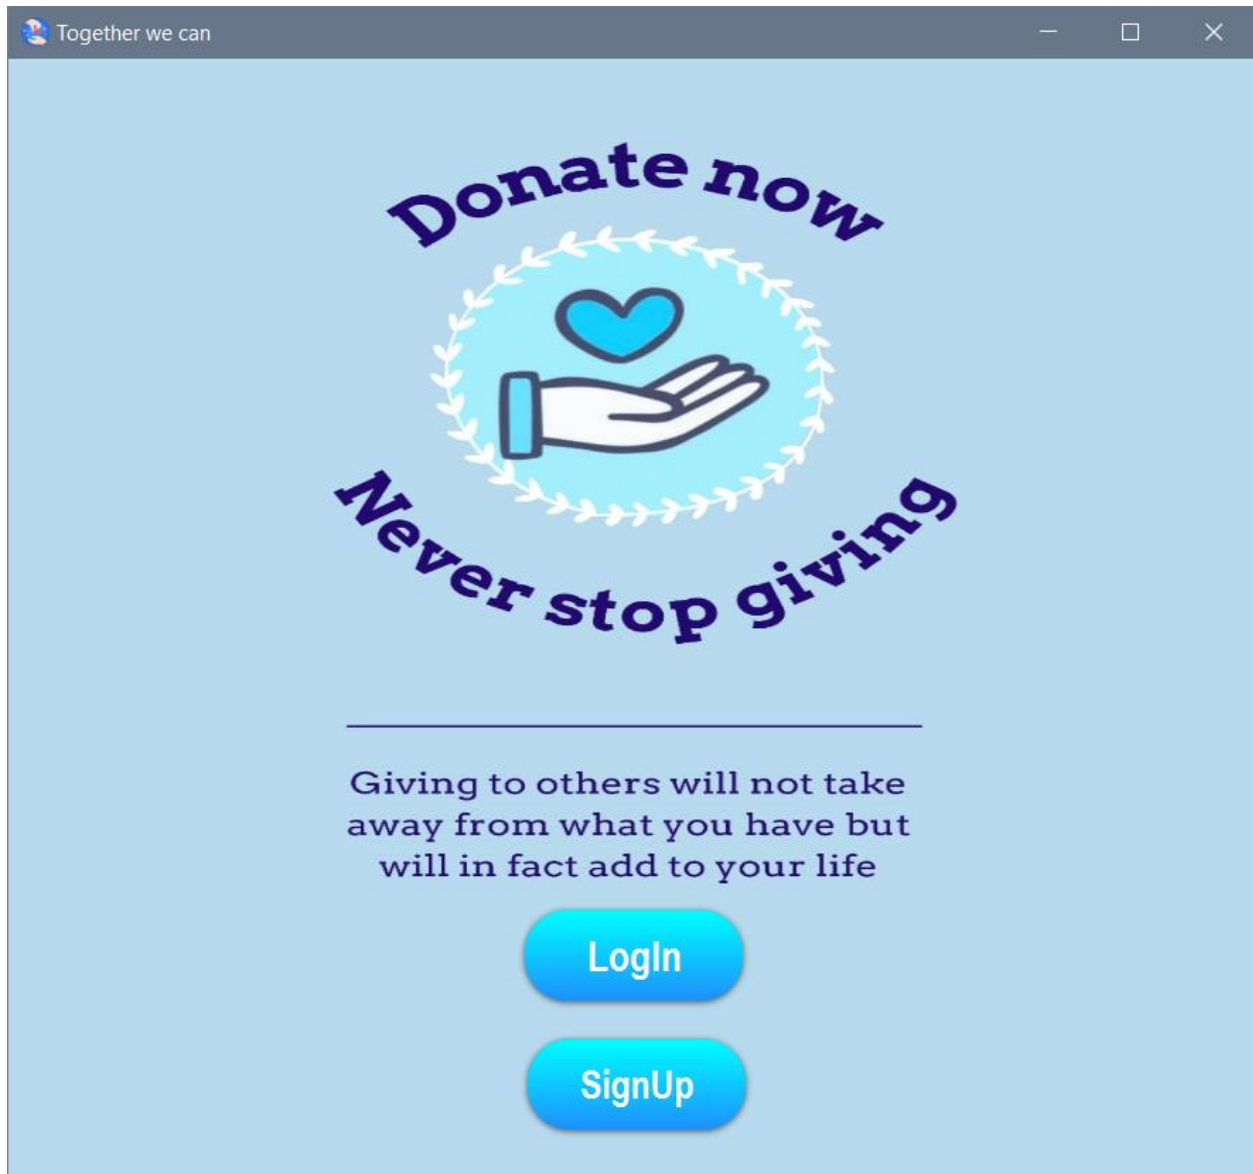

If the admin click on About us, this screen will appear.

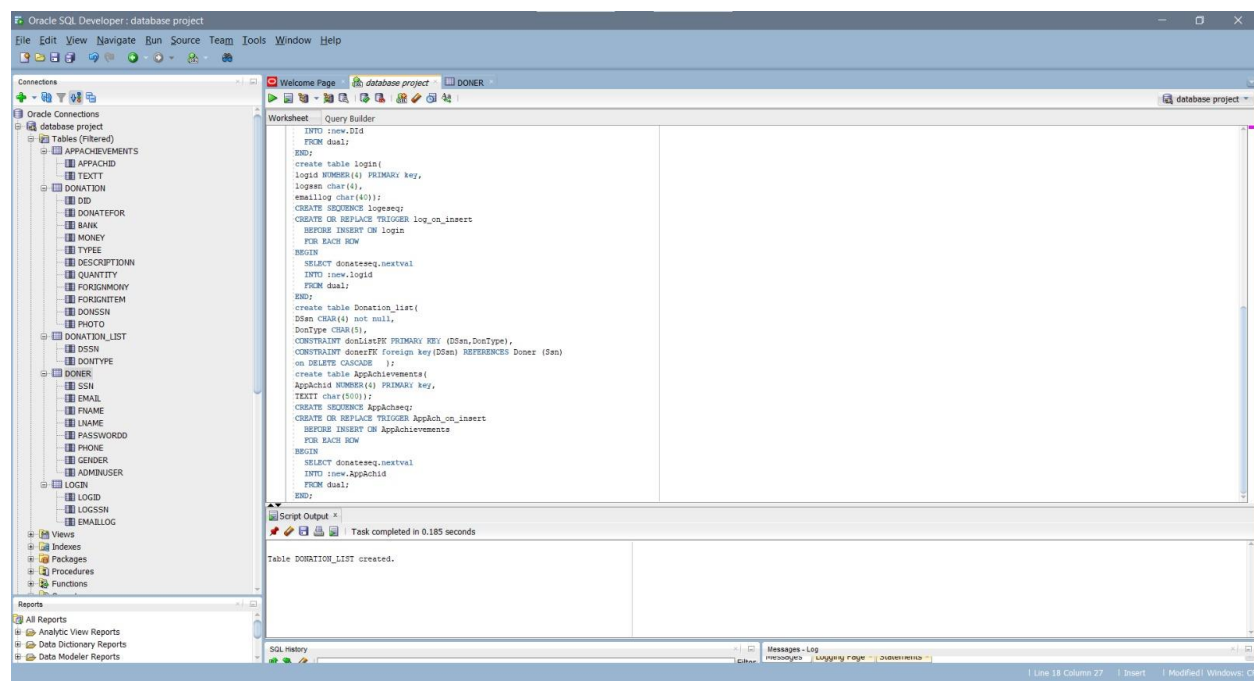

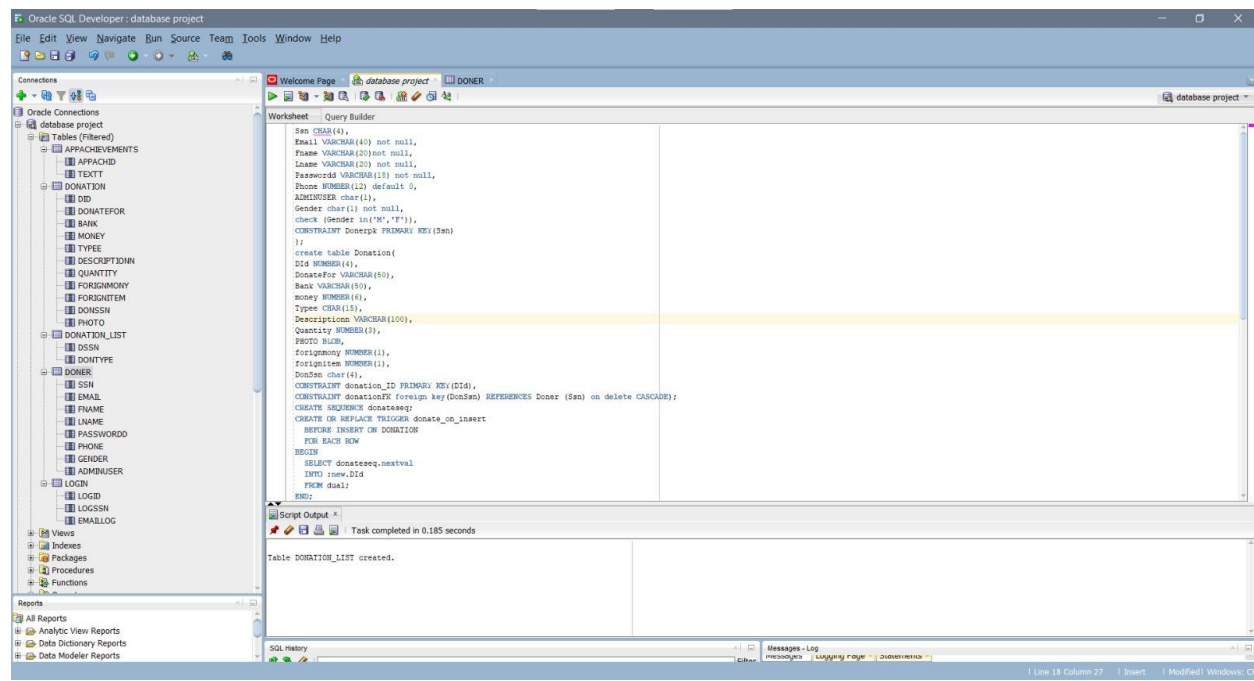

When admin click on start button, this window will open.

When click on logout, main page will appear.

SQL:

Jasper report:

May 09, 2021

15:52

Report for donations

Palestine House Association

NUMBER_OF_ITEM_DONATI 0
SUM_OF_MONEY_DONAT 999

Palestinian Renaissance Association

NUMBER_OF_ITEM_DONATI 600
SUM_OF_MONEY_DONAT 0

Conclusion:

This application helps its users in the process of donating to the charities that they wish to donate to it and also makes it easier for supervisors to follow up all donation operations in addition to the possibility of donation.
